Macao, October 30, 2013

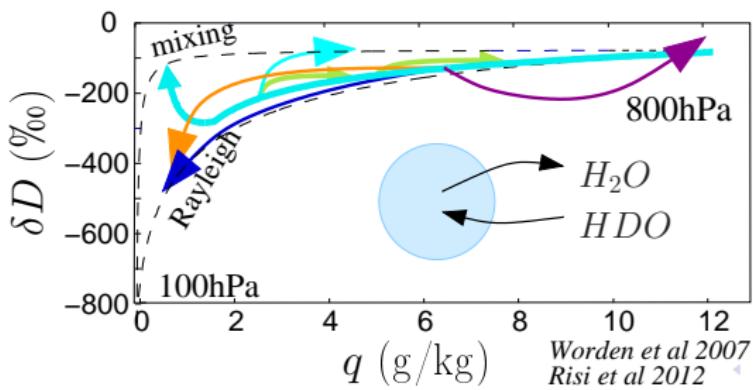

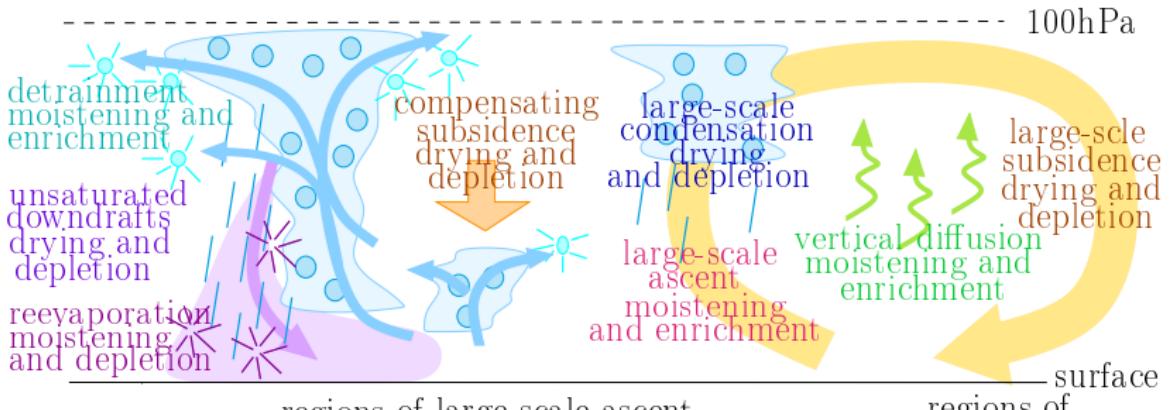

# Added value of water isotopes

# Added value of water isotopes

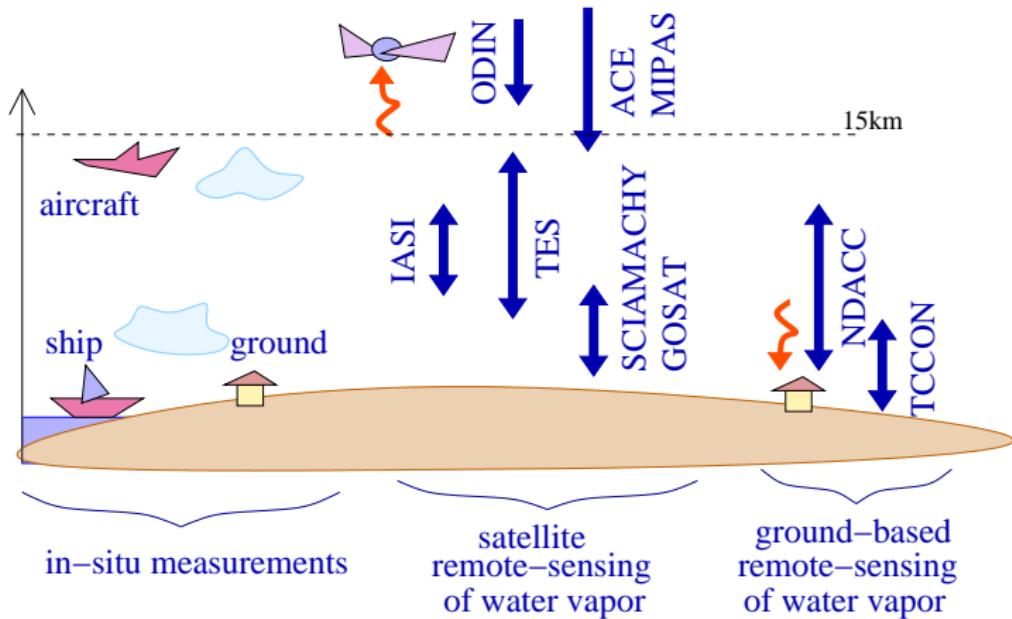

# Added value of water isotopes

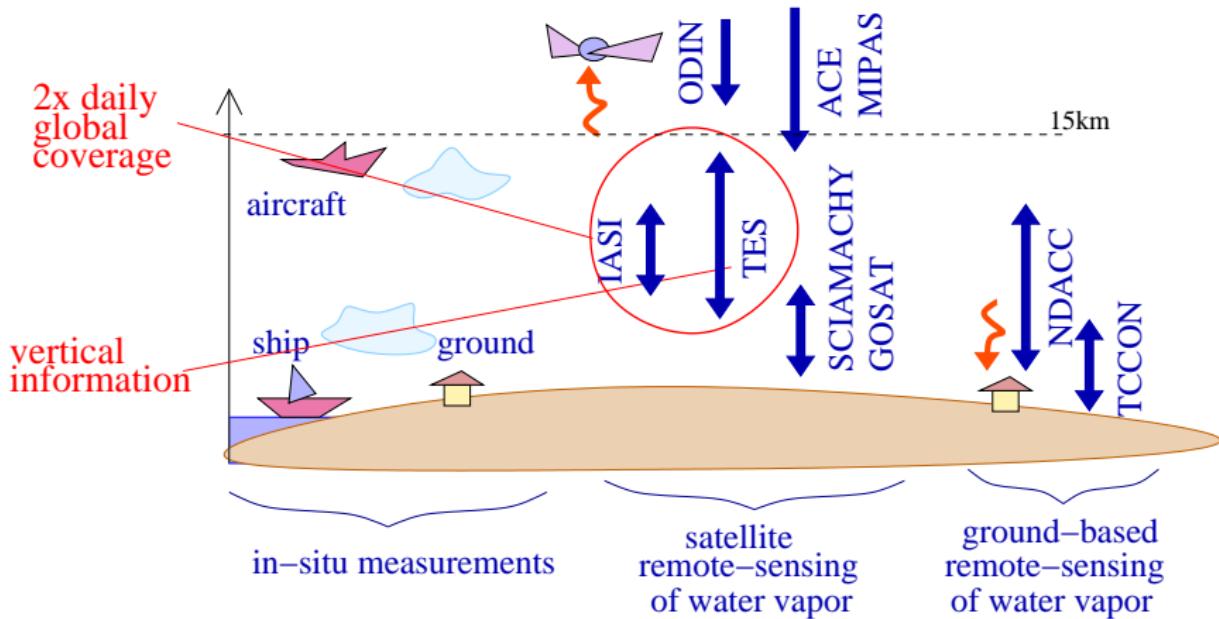

Worden et al 2007  
Risi et al 2012

- subsidence
- mixing
- detrainment
- reevaporation
- large-scale condensation

# Water vapor isotopic measurements

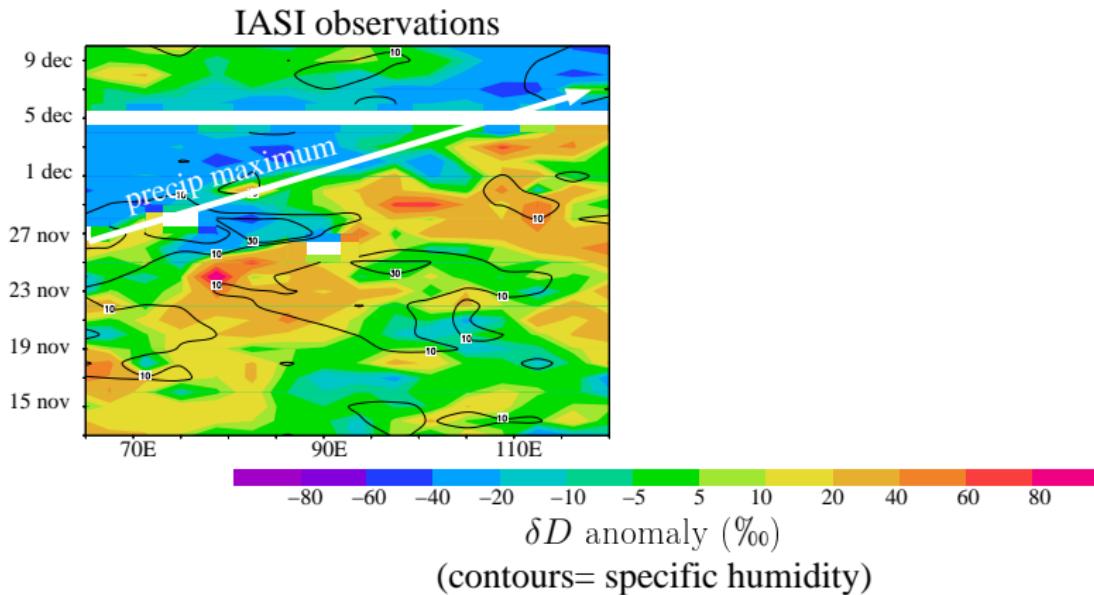

## Water vapor isotopic measurements

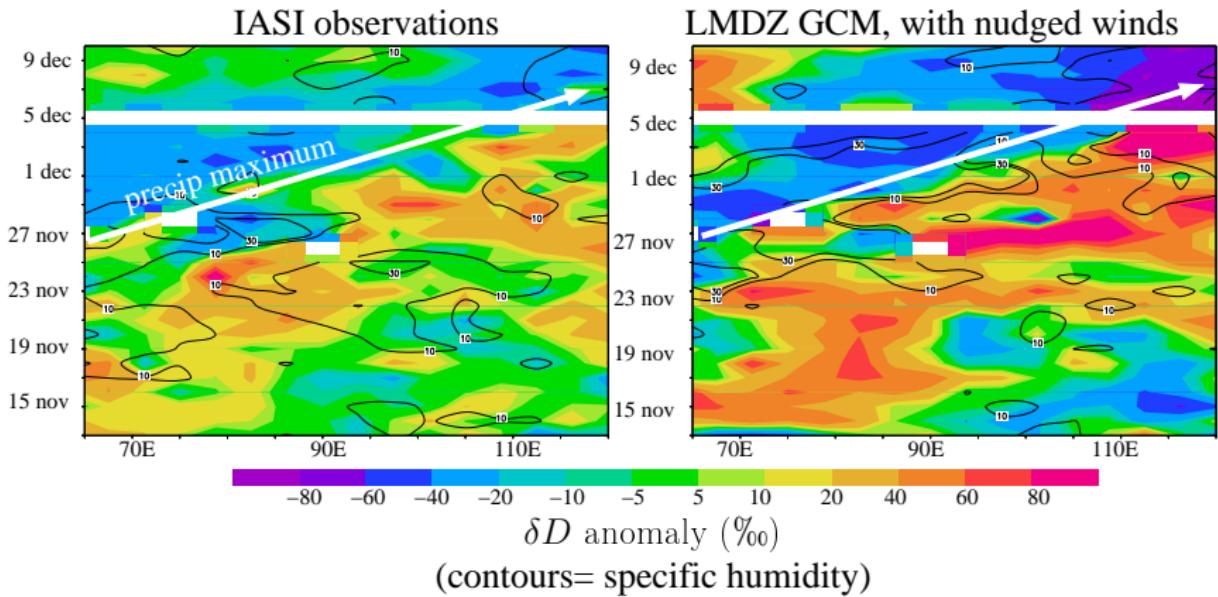

# Cindy Dynamo case

- ▶ Hovmuller diagrams at 500hPa, 10°S-10°N average

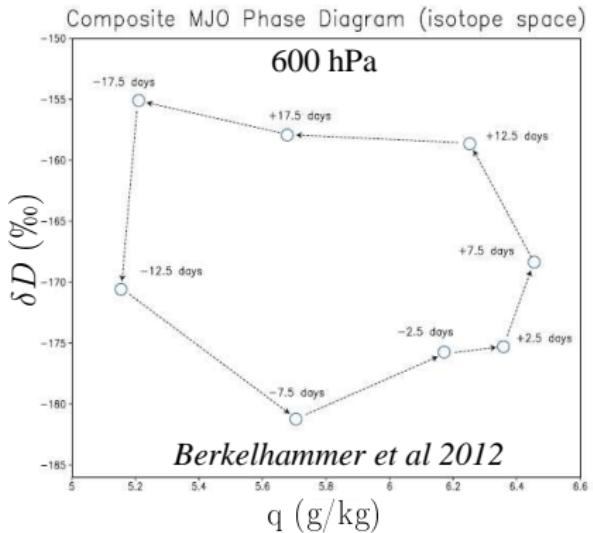

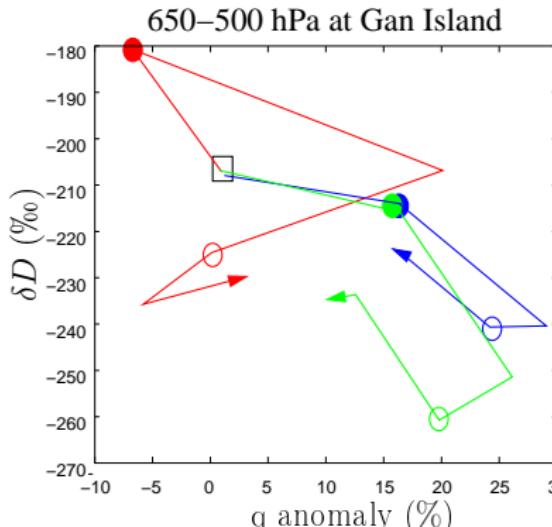

# Cindy Dynamo case

- ▶ Hovmuller diagrams at 500hPa, 10°S-10°N average

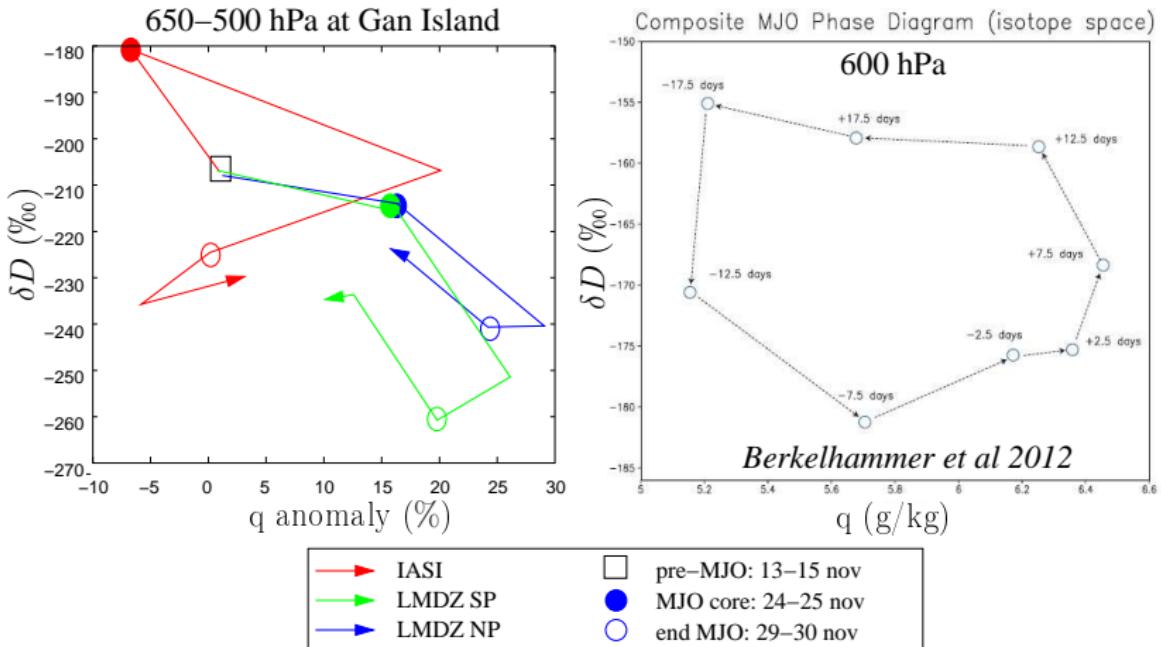

# $q$ - $\delta D$ cycles

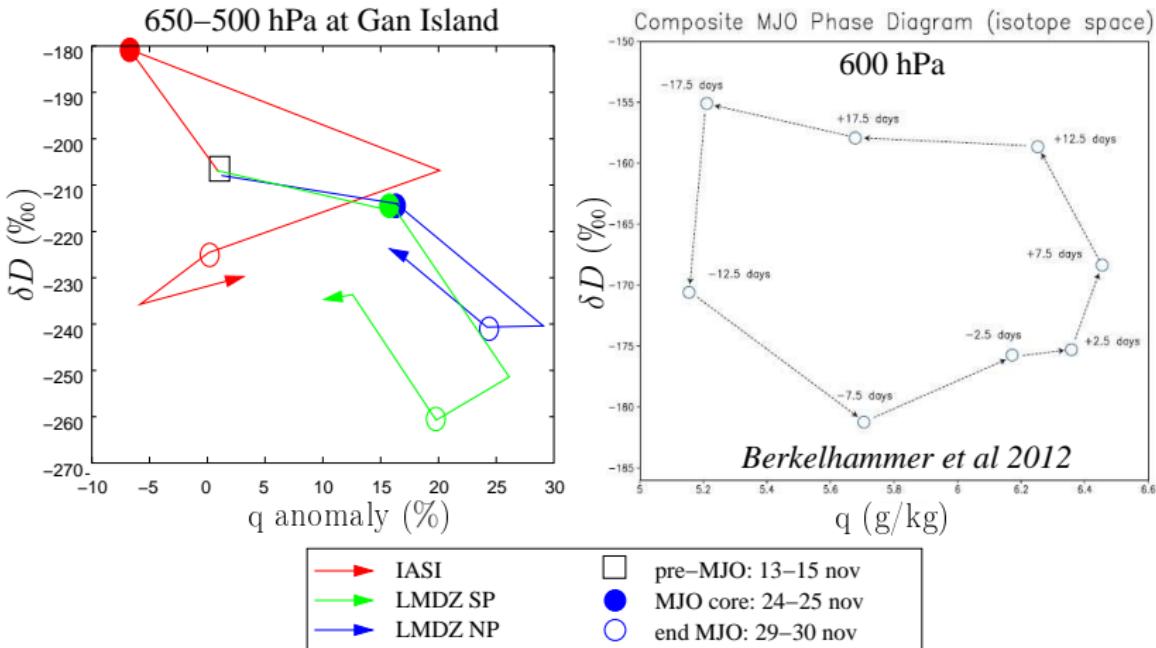

- IASI
- LMDZ SP
- LMDZ NP
- pre-MJO: 13–15 nov
- MJO core: 24–25 nov
- end MJO: 29–30 nov

# $q$ - $\delta D$ cycles

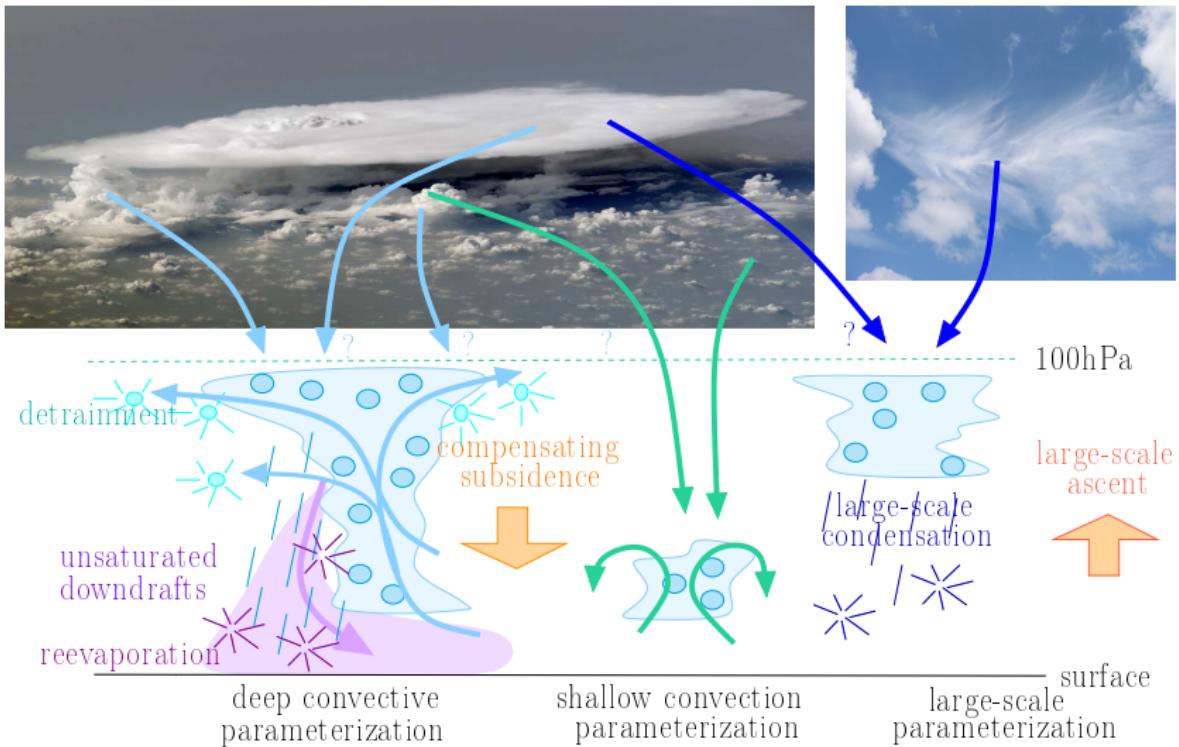

- depends on location/season? altitude? event type? physics?

## q- $\delta D$ cycles

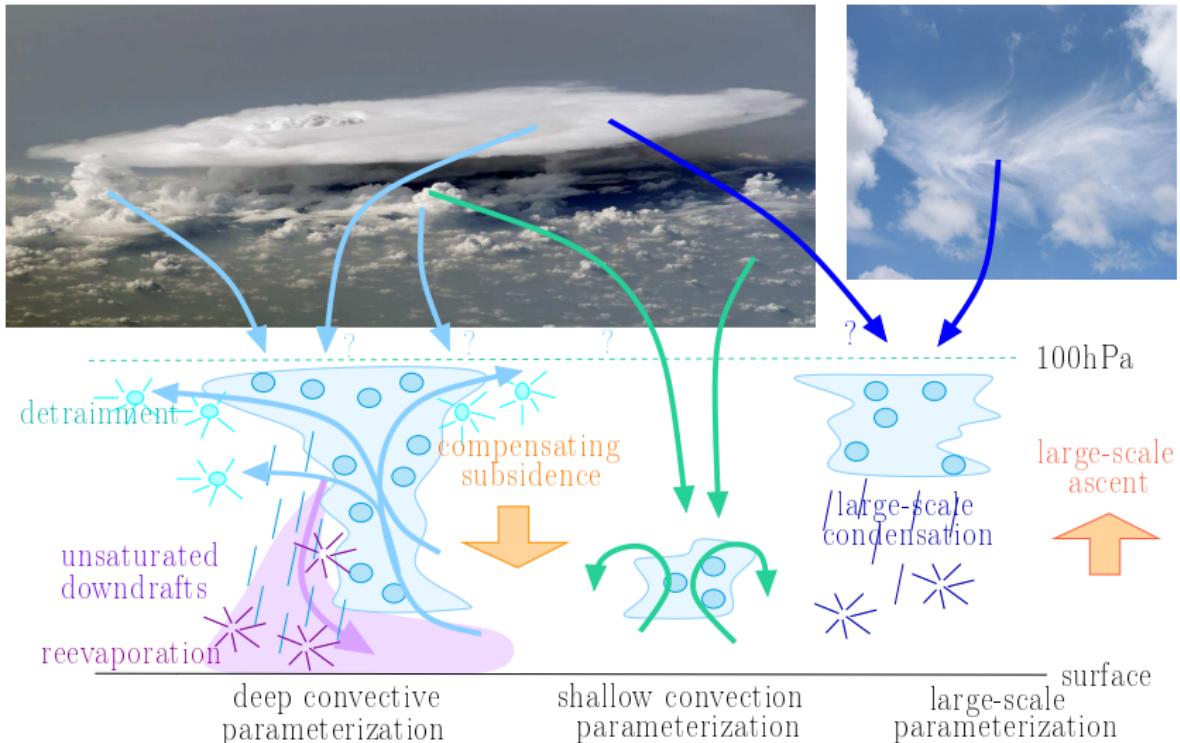

- ▶ depends on location/season? altitude? event type? physics?
  - ▶ use sign/shape as a process-oriented diagnostic?

# Convection vs large-scale precip

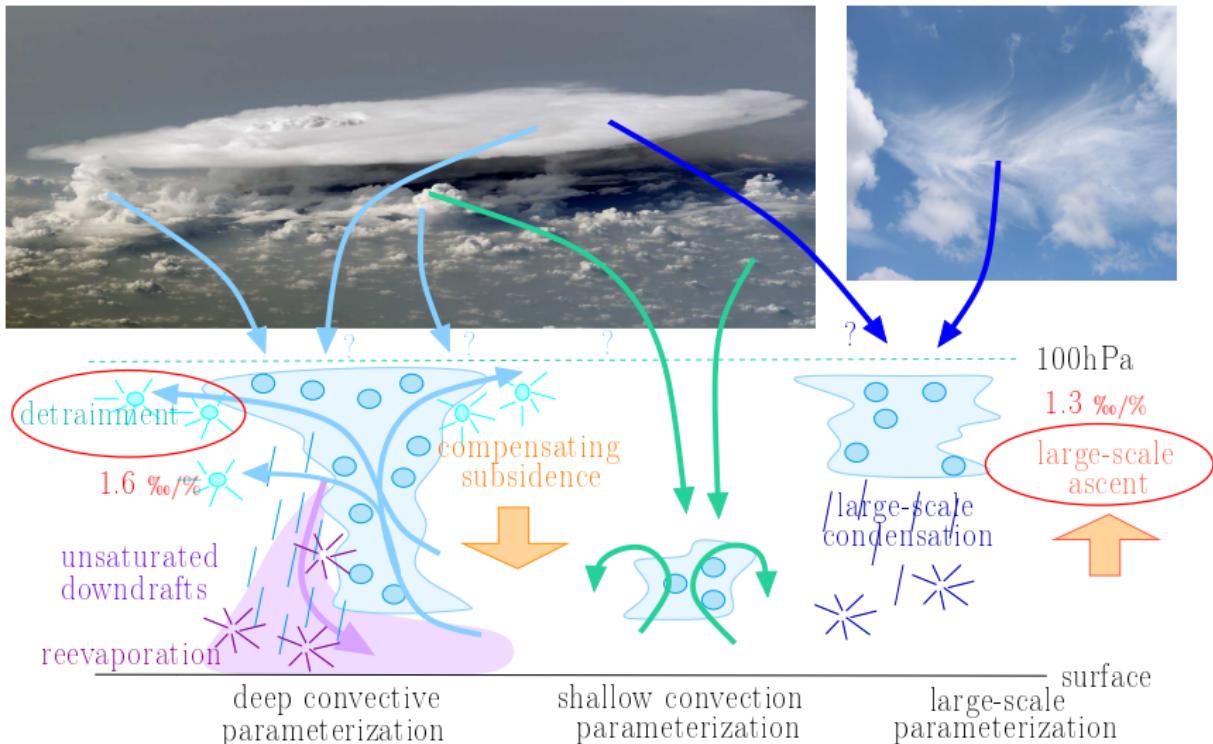

# Convection vs large-scale precip

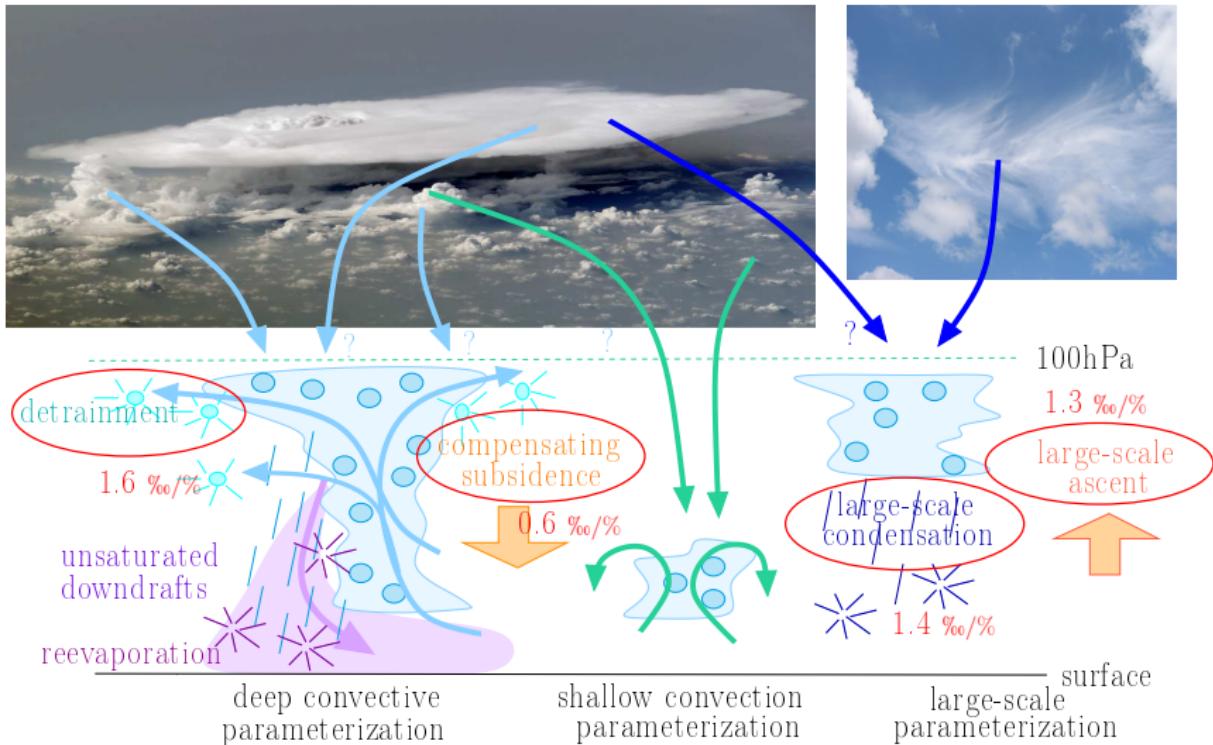

- ▶ conv vs large-scale precip arbitrary, but affects heating rate, cloudiness, humidity transport , ISV

# Convection vs large-scale precip

- ▶ conv vs large-scale precip arbitrary, but affects heating rate, cloudiness, humidity transport , ISV

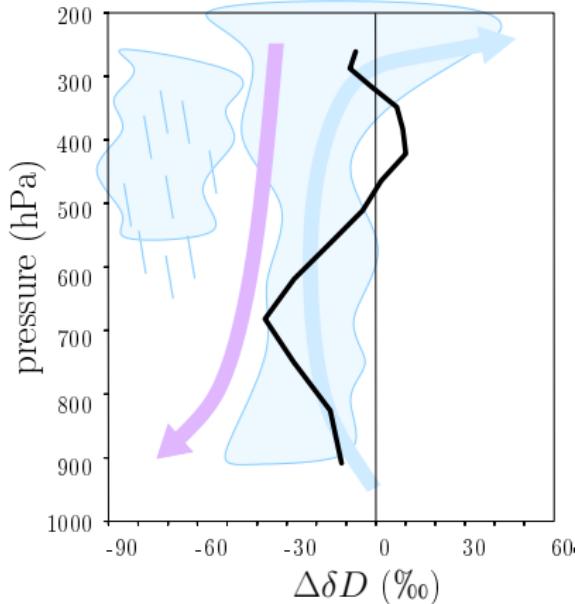

# Convection vs large-scale precip

- ▶ conv vs large-scale precip arbitrary, but affects heating rate, cloudiness, humidity transport , ISV

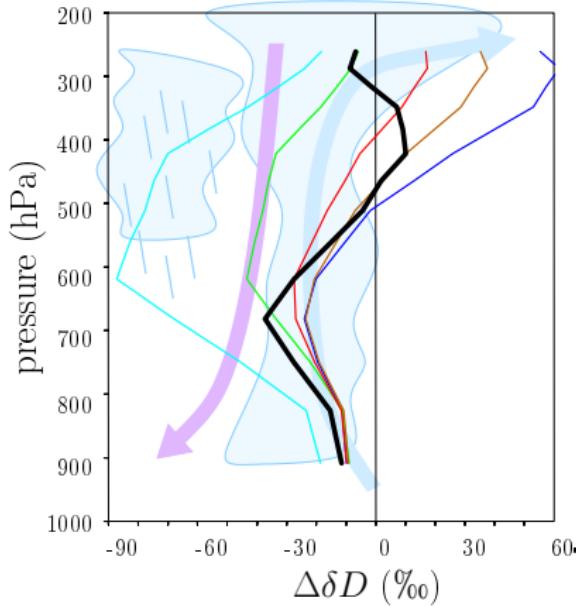

## Sensitivity tests in LMDZ

Amazon, DJF-JJA (wet-dry)

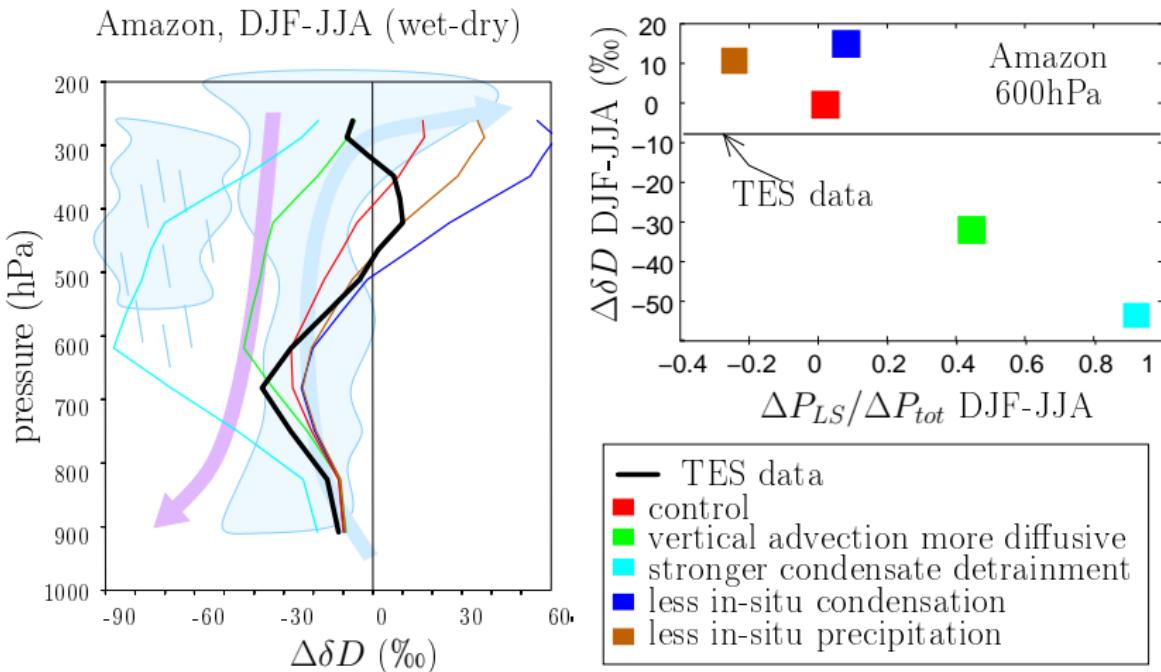

# Sensitivity tests in LMDZ

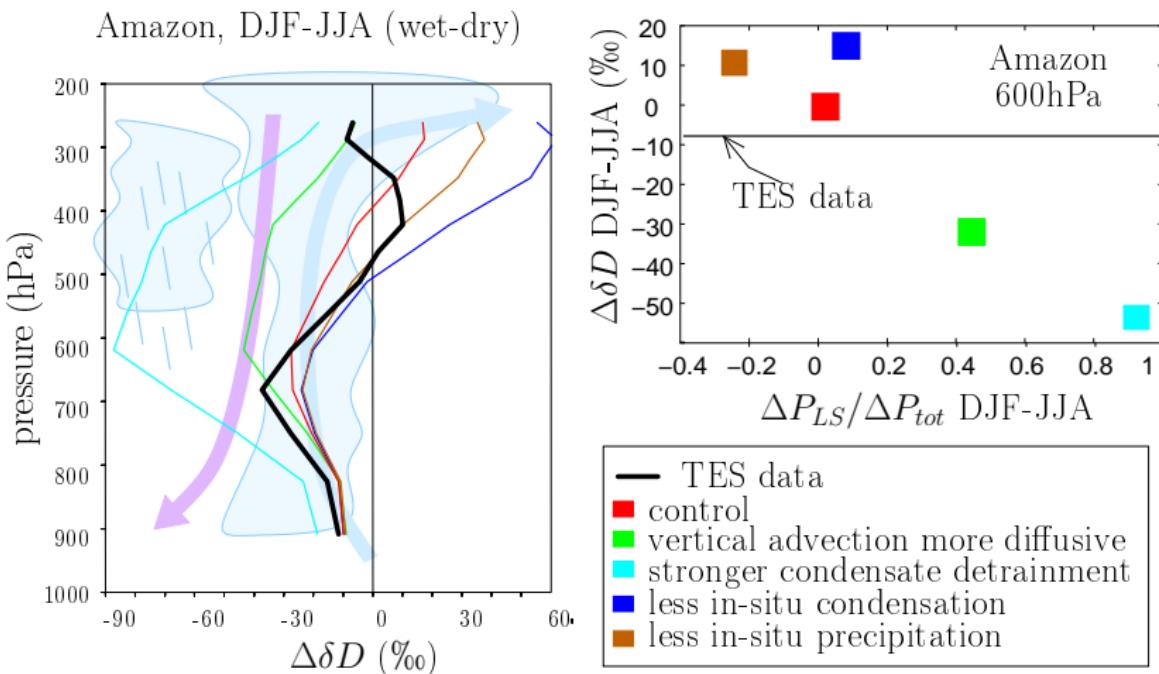

Amazon, DJF-JJA (wet-dry)

# Sensitivity tests in LMDZ

# Sensitivity tests in LMDZ

- ▶ precipitating events deplete the tropospheric vapor all the more as it is associated with large-scale precipitation  
⇒ use it more quantitatively to evaluate conv vs large-scale precip partitionning and underlying heating profiles

# Summary and perspectives

## Summary

- ▶  $\delta D$  informs about moistening and dehydrating processes
- ▶  $q - \delta D$  during MJO informs about relative timing of processes
- ▶  $\delta D$  depletion during precip events reflects conv vs large-scale partitionning

# Summary and perspectives

## Summary

- ▶  $\delta D$  informs about moistening and dehydrating processes
- ▶  $q - \delta D$  during MJO informs about relative timing of processes
- ▶  $\delta D$  depletion during precip events reflects conv vs large-scale partitionning

## Perspectives

- ▶ lots of measurements exist but are still under-exploited
- ▶ use isotopic measurements quantitatively
- ▶ Sensitivity tests, model intercomparison (8 GCMs, 2RCMs have isotopes)
- ▶ Cindy Dynamo case study
- ▶ Comparisons with CRMs (SAM, soon WRF and MesoNH)
