

Liste complète des publications (Mise à jour : décembre 2023) :

232. Liang Lili et al. 2023, Changing footprint of the Pacific Decadal Oscillation on global land surface air temperature. *Science Bulletin*. <https://doi.org/10.1016/j.scib.2023.12.004>
231. Sun, C., Jiang, Z., Tang, Z., & Li, L. (2023). Multi-objective ensemble-processing strategies to optimize the simulation of the western North Pacific Subtropical High in boreal summer. *Geophysical Research Letters*, 50, e2023GL107040. <https://doi.org/10.1029/2023GL107040>
230. Li, W., Jiang, Z., Li, L. 2023. Anthropogenic Influence on the Record-Breaking Compound Hot and Dry Event in Summer 2022 in the Yangtze River Basin in China. *Bulletin of the American Meteorological Society*, 104(11), E1928-E1934. <https://doi.org/10.1175/BAMS-D-23-0149.1>
229. Zhang Z, Li Y, Li L, Zhang C, Sun G. Characteristics of Advection Fog at Qingdao Liuting International Airport. *Atmosphere*. 2023; 14(8):1310. <https://doi.org/10.3390/atmos14081310>.
228. Zhu H, Jiang Z, Li L, Li W, Jiang S, Zhou P, Zhao W, Li T. 2023. Intercomparison of multi-model ensemble-processing strategies within a consistent framework for climate projection in China. *Science China Earth Sciences*, 66, <https://doi.org/10.1007/s11430-022-1154-7>
227. Zhang, J., Wu, T., Li, L. et al. Constraint on regional land surface air temperature projections in CMIP6 multi-model ensemble. *npj Clim Atmos Sci* 6, 85 (2023). <https://doi.org/10.1038/s41612-023-00410-6>
226. Li, Z., Ciais, P., Wright, J.S. et al. Increased precipitation over land due to climate feedback of large-scale bioenergy cultivation. *Nat Commun* 14, 4096 (2023). <https://doi.org/10.1038/s41467-023-39803-9>
225. Huang, X., Dunn, R. J. H., Li, L. Z. X., McVicar, T. R., Azorin-Molina, C., & Zeng, Z. (2023). Increasing global terrestrial diurnal temperature range for 1980–2021. *Geophysical Research Letters*, 50, e2023GL103503. <https://doi.org/10.1029/2023GL103503>
224. Wen Na, and Laurent Li, 2023, Impact of La Niña on the following summer East Asian precipitation through intermediate SST anomalies. *J Climate*. <https://doi.org/10.1175/JCLI-D-22-0650.1>
223. Fu, J., Jian, Y., Wang, X. et al. Extreme rainfall reduces one-twelfth of China's rice yield over the last two decades. *Nat Food* 4, 416–426 (2023). <https://doi.org/10.1038/s43016-023-00753-6>
222. Wang, D., Tian, L., Risi, C., Wang, X., Cui, J., Bowen, G. J., Yoshimura, K., Wei, Z., and Li, L. Z. X.: Vehicle-based in situ observations of the water vapor isotopic composition across China: spatial and seasonal distributions and controls, *Atmos. Chem. Phys.*, 23, 3409–3433, <https://doi.org/10.5194/acp-23-3409-2023>, 2023.
221. Tang, S., Vlug, A., Piao, S. et al. Regional and tele-connected impacts of the Tibetan Plateau surface darkening. *Nat Commun* 14, 32 (2023). <https://doi.org/10.1038/s41467-022-35672-w>
220. Wen Z., R.Yu, P. Zhai, Y. Yin, L. Li, 2022, The evolution process of a prolonged compound drought and hot extreme event in Southwest China during the 2019 pre-monsoon season, *Atmospheric Research*, 283, 106551, <https://doi.org/10.1016/j.atmosres.2022.106551>.

219. Zhang, Y., Narayanappa, D., Ciais, P., Li, W., Goll, D., Vuichard, N., De Kauwe, M. G., Li, L., and Maignan, F.: Evaluating the vegetation–atmosphere coupling strength of ORCHIDEE land surface model (v7266), *Geosci. Model Dev.*, 15, 9111–9125, <https://doi.org/10.5194/gmd-15-9111-2022>, 2022
218. Shi Xiaoyi, et al., 2022, What controls the skill of general circulation models to simulate the seasonal cycle in water isotopic composition in the Tibetan Plateau region? *JGR-atmospheres*, 127 (22) e2022JD037048. DOI: 10.1029/2022JD037048
217. Liang, S., Ziegler, A.D., Li, L.Z.X. et al. Interplay of greening and ENSO on biosphere–atmosphere processes in Australia. *Geosci. Lett.* 9, 43 (2022). <https://doi.org/10.1186/s40562-022-00252-9>
216. Huang Xiaowen et al. 2022, Modeling urban impact on Zhengzhou storm on July 20, 2021. *JGR-Atmospheres*, 127 (22) e2022JD037387. <https://doi.org/10.1029/2022JD037387>
215. Liu, Y., Zeng et al., 2022, Increases in China’s wind energy production from the recovery of winds since 2012. *Env. Res. Lett.* 17, 114035. DOI 10.1088/1748-9326/ac9cf4
214. Liang, S., Wang, D., Ziegler, A.D. et al. 2022, Madden–Julian Oscillation-induced extreme rainfalls constrained by global warming mitigation. *npj Clim Atmos Sci* 5, 67 (2022). <https://doi.org/10.1038/s41612-022-00291-1>
213. Lian Xu et al. 2022, Biophysical impacts of northern vegetation changes on seasonal warming patterns. *Nat Commun* 13, 3925 (2022). <https://doi.org/10.1038/s41467-022-31671-z>
212. Jin Zheng, You Qinglong, et al., 2022, Increased ecohydrological drying over terrestrial ecosystems. *Atmospheric Research*, 277, 106308. <https://doi.org/10.1016/j.atmosres.2022.106308>
211. Sun, Y., Wu, H., Ramstein, G. et al. Revisiting the physical mechanisms of East Asian summer monsoon precipitation changes during the mid-Holocene: a data–model comparison. *Clim Dyn* 60, 1009–1022 (2023). <https://doi.org/10.1007/s00382-022-06359-1>
210. Vadsaria et al., 2022, Freshwater influx to the Eastern Mediterranean Sea from the melting of the Fennoscandian ice sheet during the last deglaciation. *Scientific Reports*, 12, 8466. <https://doi.org/10.1038/s41598-022-12055-1>.
209. Guo Lianyi, et al., 2022, Increase of future summer rainfall in the middle and lower reach of the Yangtze River basin projected with a nonhomogeneous hidden Markov model. *Geophys. Res. Lett.*, 49 (7), e2021GL097325. DOI: 10.1029/2021GL097325
208. Wen Na, et al., 2022, Response of East Asian summer precipitation to intermediate SST anomalies while El Niño decays and dependence on type of events. *Journal of Climate*, 35(12), 3845–3860. DOI: <https://doi.org/10.1175/JCLI-D-21-0335.1>
