
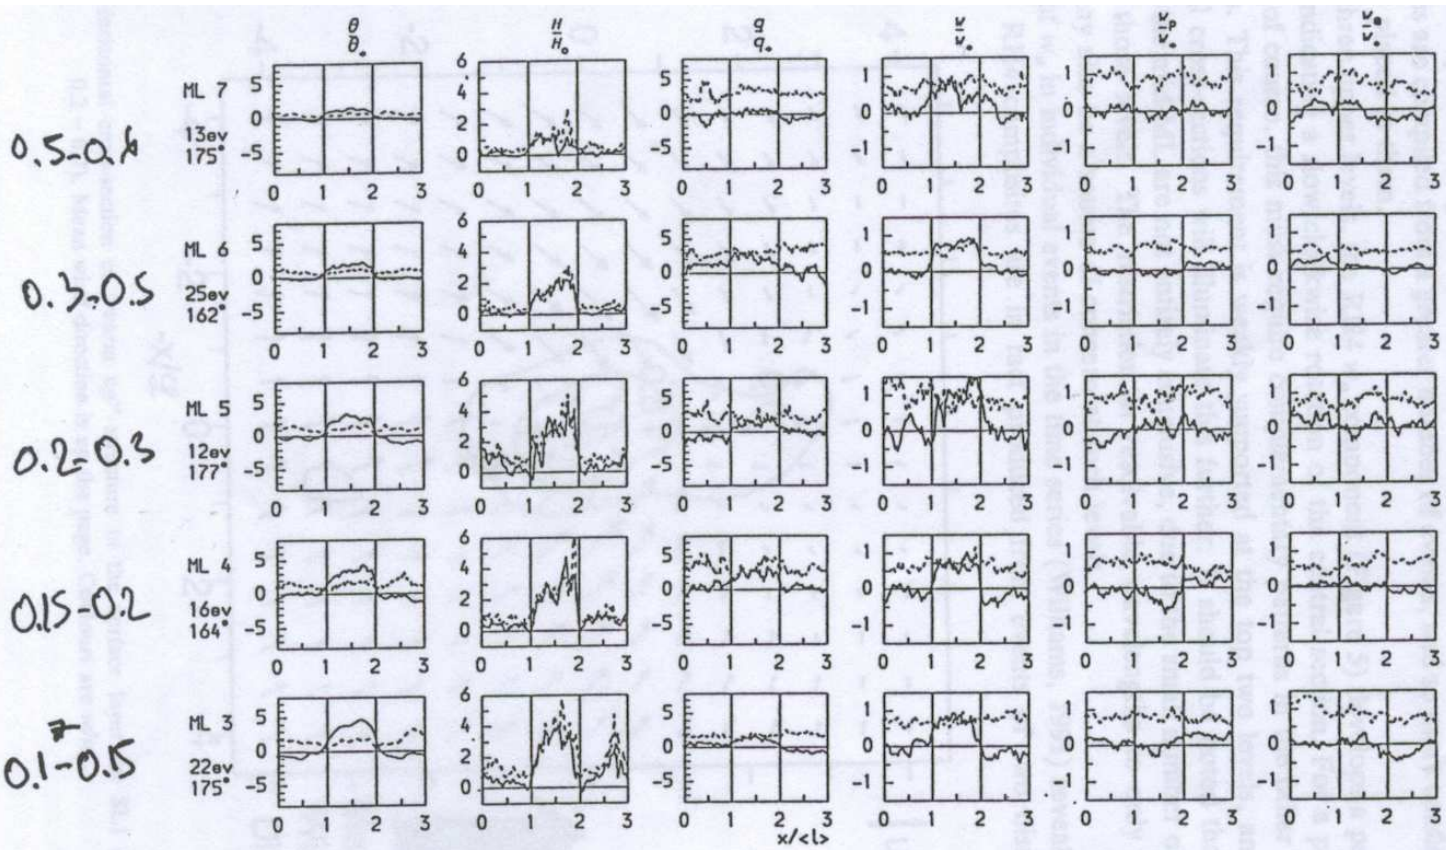

Fig. 4. "Warm up" mixed layer combined composites in the RH2 (180°) direction. Columns represent composites of the same normalised physical variable. Rows represent composites in five mixed-layer height categories: ML3 ($0.10 < z/Z_i \leq 0.15$), ML4 ($0.15 < z/Z_i \leq 0.20$), ML5 ($0.20 < z/Z_i \leq 0.30$), ML6 ($0.30 < z/Z_i \leq 0.50$) and ML7 ($0.50 < z/Z_i \leq 0.60$). Full lines are the average composites and dashed lines are the standard deviation composites. The weighted average relative headings appear, along with the number of events involved in the construction of the composite, at the left of each row.
