

Jet Stability

$$\lambda = 200$$

$$\lambda = 60$$

If $U''(y) - \beta$ changes sign then flow unstable

Gaussian jet $U(y) = u_0 e^{-y^2/2\lambda^2}$ stable if $\lambda > \sqrt{\frac{2}{\beta} u_0 e^{-3/2}} \approx 160 \text{ km}$.

Energy Cascade
